

Aerospace & Defence Industry

Priority provides a powerful platform for project-oriented industries such as aerospace and defence.

The Project Module, which is fully interoperable with MS-Project, manages the entire project life-cycle, from the loading of RFI and RFP requirements to the linkage of requirements to project activities, and from the definition of

- Serial-number tracking with advanced inventory-management functions
- Testing and approval capabilities attached to any transaction in the system (WIP Inventory and others)
- MRB (Material Review Board)
- ECO management

Competitive Edge

Achieve a real competitive edge in your field by taking advantage of Priority's unmatched capabilities in general management areas:

- BPM (Business Process Management) utility to improve collaboration between departments, reduce manual transfer of data and force notification functionality via e-mail or SMS messages
- Sophisticated financial and accounting system
- CRM (Customer Relationship Management), SRM (Supplier Relationship Management) and SCM (Supply Chain Management) to respond to customer requirements, combined with purchasing, order management and manufacturing
- Advanced reporting and tracking functionality

Online Access for Efficiency and Global Access

Internet-based tools and functionality - part of our fully integrated system and crucial components to any program in today's global economy - allow you to effectively manage your local and global operations, provide support for international customers, and plan and forecast efficiently and effectively. You can also communicate online with manufacturers, suppliers, dealers, and customers.

With proven success in the aerospace and defence industries, Priority will enable you to implement better product-development strategies, increase assembly speed and efficiency, streamline delivery and service, maintain high quality standards, and procure and manage materials as economically as possible.

project milestones to the generation of cost estimates and timetables. Every aspect of the project is interconnected with the entire Priority system, including purchase planning and requisitions, engineering and production control, delivery schedules and shipments, contracts and billing.

Coupled with strong security capabilities, Priority is an ideal solution for medium-sized Aerospace and Defence contractors whose needs extend to complex BOMs and global supply-chain interactions, tight engineering and rigorous QA cycles.

Industry Targeted Functionality

- Requirement management with load capabilities from original RFP documents to Scope of Work (SOW) documents
- Automatic generation of price proposals into Word templates
- R&D project management with stage gates and issue control
- Staffing and Resource Allocation, with drag-and-drop calendar synchronized with MS-Outlook
- Tight integration with MS-Project including version control
- Project-oriented production and inventory management with prototype deliveries
