

Fashion and Textiles Industry

The technical functions of the fashion and textile industry, with its very special needs, make it a challenging venue for any ERP system.

Transactions are governed by a matrix structure, multiple end products and measurements accompanied by high volumes of inventory turn-over are only a few of the complexities associated with this industry. Priority is a superior enterprise management solution for many businesses, but with carefully designed added functionality, it goes beyond the basics in providing a complete end-to-end solution for the fashion and textile industry.

Providing you with tools to manage your designs throughout their entire life cycle, Priority helps you manage your products from the design stage to proto-typing, manufacturing and distribution, inventory control and even down to article turn-over at each retail outlet. Use the cut and dice data views (OLAP) to analyze your financial results to avoid costly BI investments.

Industry Targeted Functionality

- Matrix-driven transactions (throughout the system: from customer orders to requisitions)
- Monitoring of stock turn-over at outlets and warehouses – used to recommend replenishment and merchandise shuffling
- Forecasts and restocking plans
- Distribution-routing optimization and built-in calendar with drag-and-drop capabilities
- Continuous credit monitoring from order entry to shipping
- Various "ship to" and drop-shipment options

- Tight control on returned merchandise credit (ensuring that credit is in line with the original price of the returned goods)

Competitive Edge

Achieve a real competitive edge in the field of service providers by taking advantage of Priority's unmatched capabilities in general management areas:

- BPM (Business Process Management) utility to help streamline your business processes
- Sophisticated financial and accounting system
- Customer Relations Management for pre- and post-sales activities
- Delivery Scheduling
- Marketing and Event Management
- SRM (Supplier Relationship Management) and SCM (Supply Chain Management) to respond to customer requirements, combined with purchasing, order management and manufacturing
- Advanced reporting and tracking functionality

Online Access for Efficiency and Global Access

Internet-based tools and functionality - part of our fully integrated system and crucial components to any program in today's global economy - allow you to effectively manage your local and global operations, improve support for international customers, as well as plan and forecast efficiently and effectively. You can also communicate online with manufacturers, suppliers, retailers and customers.

With Priority's modular design, you can choose the best combination for your business in addressing the challenges of the fashion and textile industries. Streamline operations, optimize business processes, improve the customer service level by decreasing the lead times, reduce supply chain inventory, introduce new products and marketing campaigns, improve production and warehousing efficiency, improve delivery and service, maintain high quality standards and increase efficiency and profit margins.
