

## The ERP system to meet your needs and your budget

Your complete business management package

**Priority™** is the leading ERP software solution for thousands of companies worldwide, offering them a comprehensive, flexible, and affordable way to manage and grow their business.

[info@priorityerp.com](mailto:info@priorityerp.com)

**Priority ERP Pty Ltd**

**Priority** is the first application in the ERP arena to support a single integrated solution for all your operational needs, including a document management tool for browsing files and folders that looks and works just like traditional on-premise file and folder management systems, such as Windows Explorer. Powerful synchronization capabilities with your Gmail or Outlook mailbox eliminate the need to maintain your own mail server for the organization. Whether installed on-premise or used in the cloud, you will gain a single, unified security and permission management system, running on a server that is completely immune to virus and Trojan horse attacks, as well as any security vulnerabilities that may exist when multiple platforms are maintained simultaneously.

---

### Financials

Broad regulatory compliance, support for a number revenue recognition methods (a must for PSA organizations), billing and fixed assets, integrated BPM and business rules for tight financial controls, and a log of changes to financial transactions (where permitted), all accompanied by a tightly integrated user-level customizable financial reporting tool and a BI utility.

---

### Regulatory Compliance

**Priority**'s compliance capabilities are based on the quantitative characteristics of any solid financial statement -- clarity, relevance, reliability and comparability -- making it a key tool for companies aspiring to financial regulatory compliance and control.

---

### Billing

**Priority** supports a variety of billing methods and functions, including project-based billing, recurring revenues (services, rentals, etc.), pre-defined payment terms, delivery-based billing and more, all of which are tightly linked to our revenue recognition methods. These preconfigured, field-proven capabilities make invoicing and cash flow management a matter of automated control, rather than a labour intensive, time consuming and error-prone manual process.

---

### Fixed Assets

**Priority**'s fixed asset capabilities are seamlessly integrated with its purchase management module and the General Ledger (GL), providing complete lifecycle tracking and depreciation of assets, from purchase to retirement.

---

### Cash Management

**Priority**'s cash management solution provides for complete, detailed monitoring of Order-to-Cash and Purchase-to-Pay processes, with built-in BPM enabling close tracking of Days Sales Outstanding (DSO), aging and cash-flow projections.

---

### Cost Control

Manage and control costs using multi-dimensional profit and cost centers.

---

### Budget Control

Budget versions, budget periods, budget trees, and BPM are tightly integrated into the organization's business activities from the purchase requisition through delivery, including interdepartmental service charges and inventory transactions.

---

### WMS

**Priority**'s WMS facilitates wave and warehouse task management, including added functionality such as hot replenishment, cross-docking and a selection of replenishment strategies from which to choose, depending on the nature of the items, distribution strategies and other factors

## Mobile

**Priority's** suite of mobile solutions offers customers on-the-go, personalized access to business-critical functionality in areas such as warehouse management, field sales and field service. This offering is exceptional in the sense that our mobile interface is built as a native application on the device's operating system (OS), giving us the flexibility to use features and add-ons that are not available on mobile web applications and giving you the fastest response possible from your mobile device. The mobile-enhanced user interface is specially designed for touch control and comfortable use on a mobile device.

---

## Time and Attendance

**Priority's** Time and Attendance software provides open-ended connectivity on both input and output. It can be used with a variety of data collection terminals (or smart phones) and is easily configured to export payroll data to any payroll system. Its configurable architecture facilitates customization to any payroll application.

---

## Human Resources

**Priority's** suite of Human Resource (HR) solutions, is designed to help organizations automate, regulate and centralize the process of HR management. As a whole, this suite addresses several major tasks associated with the HR function from application to retirement, including recruitment, hiring, benefits administration, employee assignment, and more.

---

## Business Intelligence

**Priority's** BI and analytics tools are built as an integrated part of the application. As such, users can drill-down with a single click — from aggregated data presented in dashboards and dynamic BI reports with "slice and dice" tools to the underlying data elements of those aggregates in their respective **Priority** forms. Users have the freedom to independently tailor reports and dashboards, add and personalize shortcuts and business metrics, and easily slice and dice data of all types.

---

## Manufacturing

When integrated with **Priority's** WMS, our manufacturing module provides a complete solution for the entire Order life cycle - from the customer order, to manufacturing resource planning replenishment, warehouse management, delivery, costing and financials.

### Key Features:

- **Product data management** - maintain part numbers, bill of materials (BOM), routings and work centers, and integrate with Product Change Control (PCC) or Lifecycle Management (PLM).
  - **ECO management and revision control** - organize drawings and other documents associated with engineering changes, track their approval process and link any changes to work orders and requisitions, via part revisions and BOM revisions.
  - **Multi-division and multi-site planning capabilities** - MPS, MRP and APS (advanced planning & scheduling) are adjustable for multiple production control methods used in discrete, repetitive, and mixed-mode manufacturing environments.
  - **Manufacturing execution** - track operations and production progress, quality control, rework and scrap ratios, while supporting data collection via bar code or RFID equipment, SCADA and manually-keyed entries.
  - **Quality control and assurance** - define testing procedures and standards for inspection of purchased or outsourced components, inventory sampling, work order testing and final QA approval.
  - **Lot and serial number tracking** - track serialized parts and their lot attributes throughout the part's life cycle: from the receipt of part components through delivery of the finished product, servicing, RMA, and scrapping.
  - **Project-oriented manufacturing** - associate each manufacturing process with its corresponding project, from inventory allocation through planning, material requisitions, issues to the plant floor, work order handling, assembly and testing, and delivery of the finished product. Tight cost accounting provides accurate real-time project costs at each stage of the project, and ensures that the project team is aware of any milestone deviations.
-

## Project Management

**Priority's** Project Management module offers users capabilities that match and surpass those of dedicated project management systems. Project planning supports task interdependencies within or between projects, while activity-related reporting of labor & expenses and built-in BPM tools make the maintenance of project progress, in terms of both deliverables and outlays, an integrated part of the organization's daily routines. Team collaboration is facilitated by linking each task to its related project and activity, coupled with e-mail integration that synchronizes relevant comments directly to the associated entity, ensuring that team members are always in the loop.

### Key Features:

- **Resource Management**
  - Integration with MS Project
  - Resource load simulation
  - Resource load views
  - Manage external resources, such as subcontractors
  - Resource calendar
- **Project Management Capabilities**
  - Manage Scope of Work (SOW) and requirement documents: **Priority** offers built-in tools for loading and synchronizing the documents used to organize work requirements with the pertinent project activities and deliverables
  - Manage and authorize project revisions
  - Define advanced inter-dependencies
  - Create project related bill of materials and handle procurement
  - Schedule activities using the critical path
  - Produce Gantt charts showing base-line versus actual project dates
  - Activity and project costing and budgeting with job role pricing
  - Report time, materials and related expenses directly to the related activity and project, generate automatic notifications for project/activity related events, including expense and timesheet approval
  - Manage project invoicing, including support for pro forma invoices and income recognition
  - Link service contracts to the project

## Document Management

**Priority's** Document Management module provides a new level of integration for the document management functionality in enterprise applications, by using the same security/permission system that governs the entire application to regulate document access. It also provides a built-in File Explorer and the ability to manage multiple links from a number of different system records to a single file.

Priority's document management tools let you instantly map any records to which a given file has been attached. Moreover, since the links from all these records refer to the same file, there is no need to maintain multiple copies of each file, thus eliminating the potential for discrepancies.

## Customer Service and Support

**Priority's** customer service and support module is fully integrated with all other **Priority** functions to deliver a holistic view of the customer. Customer issues can be reported by the customer directly, via **Priority's** Customer Service web portal, or by service & support personnel, using **Priority's** call center reporting functionality. Call center reps can keep track of open service calls, call assignment, escalation status, related communications with the customer and follow-up calls.
